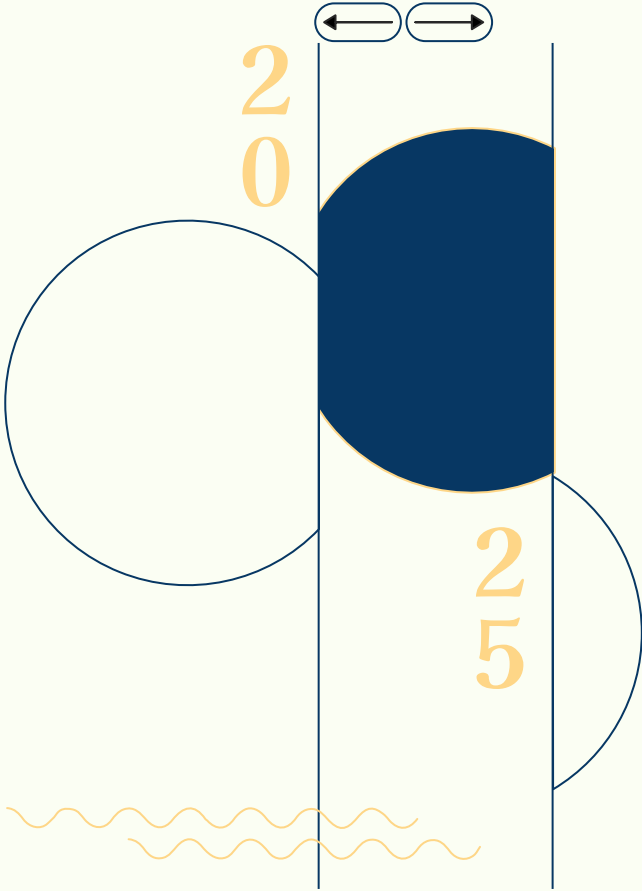
NoCrastination



The PROBLEM

Procrastination isn't just a time management problem, **Motivation and Energy** are the biggest blockers. According to our own project research survey (67 Responses):
"Only 10.4% cite time skills as the main barrier. 48% struggle with low motivation, 28% with mental exhaustion*"

Existing motivation tools aren't enough: Nudges, reminders, gamification exists, but those who take time to set them up usually aren't those particularly struggling with motivation either. Current existing apps assume our future selves will follow a plan, which is often unreliable.

Essentially, It's a self-deception problem –– We lie to ourselves:
"I'll start later" "I work best under pressure"...

The SOLUTION

"To combat procrastination, we need to **evolve** past the manual, and introduce an **automatic** way of planning our life."

NoCrastination isn't just another reminder app or planner -- it's core innovation is that it understands your cognitive rhythm (the user's natural cycles of focus, fatigue, and motivation) and adapts your schedule and reminders accordingly

- **It tracks how you actually work, not just what you plan to do, and then intelligently adjust your day to fit your real mental energy**

This is why we are introducing NoCrastination: an adaptive and personalizable assistant utilizing AI technology to assist in more than just planning, but also life.

TARGET MARKET

1. Individual Users (Primary)

- **Students & Academics:** Managing homework, essays, and exam prep
- **Professionals:** People juggling multiple projects, tasks, and deadlines
- **Demographics:** Ages 13-50, productivity conscious, current productivity tools (calendars, reminders, canvas) are inadequate

2. Institutional Users (Secondary / B2B Market)

- **Workplaces / Teams:** Improve Employee focus, reduce burnout, optimize workflow
- **Schools & Universities:** Help students manage assignments, projects, and study schedules
- **Potential for bulk licensing or physical integrations**: Desk, displays, task cards, etc.

BUSINESS MODEL

Freemium

- Personalized motivation & energy mapping →translates to task translation
- Calendar auto-scheduling & optimized daily plans
- Builds user base and engagement

Premium

- Visual analytics of your cognitive rhythms (peak hours, distraction patterns, focus trends)
- AI Dialogue Planner to help your plan, reflect, or problem-solve your week

Enterprise/B2B Licensing

- Schools & Workplaces: integrate with existing workflows
- Team dashboards, collective productivity insights, or classroom “next-step feeds”

Revenue Streams

- Individual subscriptions (monthly/yearly)
- Enterprise licenses & Institutional sales
- Future hardware add-ons or integration

The TEAM

Derrick Chen

3rd Year CogSci-ML &
Math Applied Science

Julian Luan

2nd Year CogSci-ML

Susie Oh

2nd Year Neurobio
& NeuroSci

Junior Castro

3rd Year Math-CS

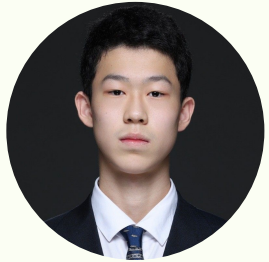
Fidan Jabrayilova

4th Year CogSci -
Design & Interaction

Nada Hendy

3rd Year CogSci-ML

Edward Zhang



3rd Year DataSci
& Math-CS

Samson Wan

3rd Year DataSci &
Math-CS
